1. Login to LRZ Linux Cluster:
Start PuTTY GUI ...
... enter your user name and the LRZ Linux Cluster Login Node name ...
... Change to *Colours* in *Window Section* ...

... and click on 
*Use system colours* ...
... Change to **Data in Connection Section** ...

... Enter in **Terminal-type string** `linux` ...

... remove **Terminal Speed** ...

... **Open** ...
... enter your **SSH Password** of your Linux Cluster Account ...
2. Start Remote Visualization Job:
... start the Remote Visualization (RV) job ...

... Load module ...
... Check for Resources ...
... Start the RV job ...

When starting the first time, you are asked to set a VNC password!
Please set a reasonable one (NOT EMPTY)!
You can change it anytime you want by issuing `vncpasswd` on a Login Node.
3. Open the SSH Tunnel:
1. Enter the port value

2. Add

3. Apply

---

... open a SSH Tunnel ...

... Right-click on PuTTY window bar → Change Settings ...
4. Start the Webbrowser:
... Open a Browser (Firefox/Chromium) ...

1. Copy URL to your browser ...

2. Connect
... Enter your VNC Password ... (the none-empty set before)
... Ready to work!
Open Console; Use Env Module system; Start your programs
For instance, Paraview...
5. Kill the RV Job and Logout:
When you finished ...
... close your Browser ...
... issue *rvsvnckill* inside the PuTTY window

... and *exit* to log out
I NEED MORE TIME!!!!!!

DECISION MUST BE DONE BEFORE THE RV JOB IS ISSUED
ONCE THE TIME IS OVER, THE JOB IS KILLED!

The Default RV job length is 2 hours.

If you need more, use the --time= flag of rsvncstart, e.g.:
   rsvncstart -w --time=06:00
for 6 hours.

Maximum is 2 days. But who can live without sleep?!
