- Frequently Asked Questions (FAQ)

The LRZ Cloud portal is a new service offering from LRZ for its customers. The idea is to offer a responsive service that allows customers to upload and use their own virtual machine images. The new LRZ Compute Cloud system is in the early testing phase. It can be accessed via the new login page:

https://stack.srv.lrz.de

CAUTION: The system is in its EARLY TESTING phase. Please do not use it for production workloads yet.

Getting access

To access our cloud environment, you need a LRZ project that is enabled for the LRZ Compute Cloud service. More information on this subject can be found here.

Remember, that the new cloud system is still in its early access phase and subject to testing. Do not expect a stable environment, do not use it for production workload. At the moment, the new Cloud offering is open for current Cloud users for testing purposes.

If you want to get access to the old and stable Cloud environment, use the following address to log in: https://www.cloud.mwn.de
This allows you to access an OpenNebula-based environment that is the predecessor of our new Cloud based on OpenStack. The documentation of the stable Cloud environment can be found here.

Tutorials

1. Create a new virtual machine (VM)

Frequently Asked Questions (FAQ)

The FAQ section covers questions that will come up regularly. You should consult this page before contacting the cloud support team.
