DSS How an external invited user gets started with Globus Online

In the following, we present a short step-by-step introduction to get started with data transfer to/from a DSS container for external invited users via Globus Online.

So if you have been invited by a Data Science Storage Data Curator to access the data of a DSS container via Globus Online, you first have to log in to Globus Online. Check out this video on the various ways to log in to Globus.

After that, you can access the shared data in the DSS container by clicking on the link in the Globus Online invitation mail, you got. Check out this video on how to accept a Globus Invitation.

If you or your institution don't already run a Globus Endpoint, you will have to setup one to/from which you will transfer the data to/from the DSS container. The most simple and straightforward solution for this is to setup a Globus Personal Endpoint. Check out this video on how to setup a Globus Personal Endpoint.

Finally you now can transfer data between the Globus Endpoint using Globus Online. Check out this video on how to do this.
