Gauss GCS Large Scale Calls

Large-scale projects and highly scalable parallel applications are characterised by large computing time requirements, not only for short time frames, but often for longer time periods. Projects are classified as "Large-Scale", if they require in total at least 35 million core-hours per year on the GCS member centre's high-end systems.

For these large-scale projects a competitive review and resource allocation process is established by the GCS. Requests for resources below these limits will be accepted by the individual member centres. Requests above these limits will be handed over to GCS, handled according to the joint procedures, and will be reviewed in a national context.

A "Call for Large-Scale Projects" is published by the Gauss Centre twice a year. The next call for proposals will cover the period 1 May 2019 to 30 April 2020. Projects are classified as "Large-Scale" if they require 35 million core-hours or more per year. Eligible are applications from German universities and publicly funded German research institutions. The Call will open from

14 January 2019  until  11 February 2019, 17:00 CET (strict deadline)

Application for a large-scale project must be done by filling in the appropriate electronic application form that can be accessed from the GCS web page

https://www.gauss-centre.eu/gauss-centre/EN/HPCservices/HowToApply/_node.html

Since a new system for handling the applications will be used, we ask you to prepare your application early enough and get acquainted with the new system. Do not wait until the last minute.
