Materials - Programming with Fortran

Lecture notes

from the workshop "Programming with Fortran", from February 26 - 28, 2020, that provides an introduction to the language. Please contact one of the tutors (Bader_at_lrz_dot_de, Patel_at_lrz_dot_de) if questions about any of the materials provided below arise.

- The course schedule
- Slides and the Table of Contents for all three course days

Exercises

These consist of an exercise document which describes the problems to be solved; it also contains an index of the slides. Some code examples are available; the package includes the skeleton codes that provide starting points for many of the exercises:

- examples and skeleton code

The solutions have been packed up in ZIP format to enable unpacking also on Windows. For each course day, a separate ZIP file is available (these are made available as the course progresses):

- solutions day 1
- solutions day 2
- solutions day 3

Please unpack all the above ZIP files within the same folder, using the unzip command. Note that the Makefiles in the examples and solutions contain definitions which will only work in the course environment, and therefore need modifications if used on other systems.
